

# Security Coatings from **trusecurity**

As corporate theft and forgery spiral throughout the world, this growth has been matched by the demand for protecting almost any product that can be manufactured.

So, if you want your product to be coated, laminated or converted, talk to Tullis Russell Coaters. We have taken our extensive **experience in the manufacture of high security paper products** and applied it where security has never been applied before.

We can provide you with laminates and adhesives, which remove the risk of sending your products elsewhere during the manufacturing process. And we can add **high security taggants and hidden images** to your goods, which protect them after they have left you.

Whether you need **brand authentication** or **evidence of tampering**, our coatings are continuously evolving, ensuring that you are always in control in the battle against forgers.

## Security features

We can add a number of security features to your product including:

### Taggants

- Pigments, which absorb light and radiate in the visible wavelength.
  - Infra red, with a unique combination of wavelengths.
  - UV fluorescent, available in yellow, green, red or orange.
  - UV phosphorescent, with a UV pigment that continues to glow after the light is extinguished.

### Covert embossed images

- Encrypted, micro-embossed image, verified with a decoding lens.

To find out more about our complete range and capabilities please contact us.

## Components

- Smooth, ink receptive coatings, containing unique taggants and covert images.
- Manufactured to ISO 9001 standard.

## Benefits

- Small and bespoke runs possible.
- Security during manufacture.
  - Lamination in a totally secure environment.
  - Apply your own adhesives.
- Security after manufacture.
  - Taggants are almost impossible to duplicate.
  - Covert images can only be detected by the manufacturer's machines – so the forgers will not even know what security measures have been added.

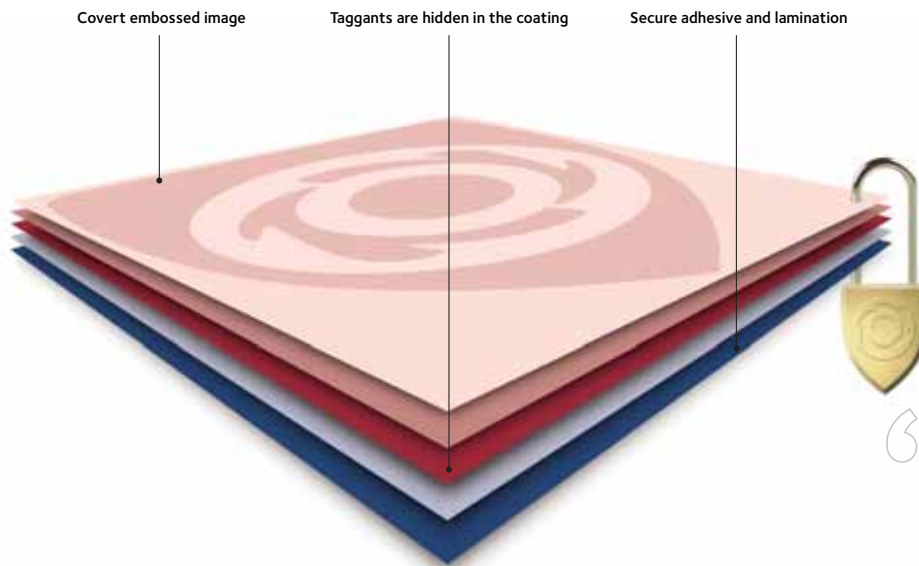

## Security is our watchword

We operate a Chain of Custody. We do everything in-house and on one site, maintaining security and integrity throughout the lifecycle of the product.

Just as important as our paper's security features is the way we maintain the security of the supply chain.

- We only sell our products to qualified and authorized printers and packaging converters.
  - secure storage.
  - production documentation.
  - waste management.

Working with brand owners, printers and finishers, we ensure that these standards are maintained, without fail.

“ Security during  
manufacture.

Security afterwards ”
