## Customised Security

Tullis Russell offers a range of additional security measures to enhance anti-fraud and anti-counterfeit properties.

## Watermarking

Tullis Russell offer a standard mill watermark. Customised watermarks to promote corporate identity are also available.

## Coloured Fibres

Security grades can also contain coloured Silurian fibres. These fibres are available in either one or both plies thanks to our twin wire production method. Fibres are available in lengths of 3mm to 10mm and in a variety of colours.

## UV Detectable Fibres

A further security measure is to place normally undetectable fibres in the paper. These fibres fluoresce when placed under ultraviolet light. Different colours of fluorescence are also available.

Tullis Russell's twin wire production method offers the opportunity to mix these features to achieve tailor-made security papers.

## Moisture

Tullis Russell can also offer a low moisture security paper to work with continuous and non-impact printing processes.

## Weights

Security papers are available from 80gm<sup>2</sup> to 300gm<sup>2</sup>.

## Chemicals

All Sensitised grades contain security chemicals. These will highlight any attempt to alter documents using acids, alkalis, bleaches or solvents, by producing a highly visible coloured reaction in the altered area.

A range of additional chemicals can be incorporated in the grade to further enhance anti-counterfeit properties.
